Please comment on the Sportsman's Bridge FAS Mitigation Plan for Sportsman's Bridge Replacement MDT Project (BR 82-1(5)5).

Sounds like a good plan to me. An updated bridge and road, plus a redo of a popular FAS. I support this project.

Please comment on the Sportsman's Bridge FAS Mitigation Plan for Sportsman's Bridge Replacement MDT Project (BR 82-1(5)5).

I support the approval of the transfer of approximately 1.5 acres of land at the Sportsman's Bridge FAS to MDT and reconstruction of the access.

Don't change or get rid of the existing fishing site next to the bridge. That site and the access is very important. I use it every year to launch my boat on the river. Thank you.

That bridge is way too skinny for todays larger vehicles especially when pulling equipment trailerd, campers, or boats. Makes it very unsafe.

However, the loss of the boat launch and fishing access would be horrible. The last thing our valley needs is one less boat access point especially following this massive influx of people during Covid shutdowns. The boat launches are already extremely crowded as it is and getting worse every year. But i would still support the bridge replacement if the new upgraded boat launch is constructed. Where can i find details on this new fwp fishing access project that would replace the lost access at sportmans bridge?

I've used the Sportsman's Bridge FAS since the 1980's and it is a wonderful access point on the Flathead River. The dual boat ramps are really easy to use, especially the channelized launch that is protected from the wind and current. If we lose this access, there are no easily accessible concrete ramps on that are not horsepower restricted. Please don't remove this boat launch unless you plan on building one identical too it. The replacement needs to have a wind/current protected launch as well.

How do you propose to allow access to the river during low water from Hanging Rock location. The current access allows year around access for outdoor activities.

The Hanging Rock harbor has a shallow access such that it is not accessible to the river during low water periods.

Please discuss.
